We claim:

8.

2

vault away from the first optic.

1	1.	An intraocular lens system, comprising:
2	a)	a first optic having a first optical zone;
3	b)	a second optic having a second optical zone; and
4	c)	at least one column joining the first optic to the second optic outside of the
5	first a	nd the second optical zones, the column being made from an expansive
6	material.	
1	2.	The lens system of claim 1 wherein the expansive material is a masked
2	hydrogel.	
ì	3.	The lens system of claim 1 wherein the expansive material comprises a
2	monomer known to occupy less volume in its pre-polymerization state than in its	
3	polymerized state.	
1	4.	The lens system of claim 1 wherein the expansive material is an acrylamide
2	polymer.	
l	5.	The lens system of claim 1 wherein the expansive material is a cross-linked
2	copolymer of	2-phenylethyl acrylate and 2-phenylethyl methacrylate.
1	6.	The lens system of claim 1 wherein the expansive material comprises an
2	acrylamide po	olymer and an anhydride-containing polymer.
	_	
1	7.	The lens system of claim 6 wherein the expansive material is caused to
2	expand by sci	ssion of its anhydride moieties.

The lens system of claim 1 wherein the columns cause the second optic to

- 9. The lens system of claim 1 wherein the first optic and the second optic comprise a soft acrylic.
 - 10. The lens system of claim 1 wherein the second optic comprises a hydrogel.
 - 11. The lens system of claim 1 wherein the second optic comprises silicone.
 - 12. The lens system of claim 1 wherein the first optic comprises silicone.
 - 13. The lens system of claim 1 wherein the first optic comprises a hydrogel.
